Dummy Variable:

```
*[2... #Practical based on exchange of values of two variables, using dummy variable.
# Python program to demonstrate
# swapping of two variables
x = 10
y = 50

# Swapping of two variables
# Using third variable
temp = x
x = y
y = temp
print("Value of x:", x)
print("Value of y:", y)

Value of x: 50
Value of y: 10
```

Dummy Variable:

```
[4]: #Practical based on exchange of values of two variables, using dummy variable.  
# Python program to demonstrate  
# swapping of two variables  
x = 75  
y = 25  
  
# Swapping of two variables  
# Using third variable  
temp = x  
x = y  
y = temp  
print("Value of x:", x)  
print("Value of y:", y)
```

Value of x: 25

Value of y : 75
